

Need a Cost Effective Absorbent? Buy Amerizorb Throw & Go

This graph shows Throw & Go's ability to absorb three times as much contaminant as floor dry. If 5 gallons of transmission fluid is spilled, you would need approx. 4.5 cubic ft of Floor Dry to clean up the spill and only 1.5 cubic ft of Throw & Go. Floor Dry also requires force contact and takes more than twice as long to absorb. Floor dry may seem like a cheap alternative but it is actually much more expensive and less effective than Throw & Go.

TCLP Graph

This graph displays results from a TCLP showing how much Ethylene Glycol (anti-freeze) is released from each product in a 20 year landfill simulation.

Results: Amerizorb Throw & Go products remove more Ethylene Glycol and holds onto the chemical without releasing it back into the environment.
